

### Product Spotlight

#### Asset & Personnel Tracking Software

SecurLynx™ is an easy to install, turn-key solution that allows companies to track personnel and assets within diverse environments. The software captures RFID tag information, that is placed on an asset or employee badge, as it moves through a control point. The information is then analyzed by the business rules created by the company. Custodial relationships between personnel and assets are easily assigned with business rules controlling what to do if the asset is being moved or taken by an unauthorized person.

- ✓ Integrate and output to multiple database environments
- ✓ Interface with other IT applications
- ✓ Security notifications of abnormal movement
- ✓ Authorized access to transaction history via the internet or corporate network
- ✓ Link secure access tools within your networked environment

#### Mobile Handheld Inventory Software

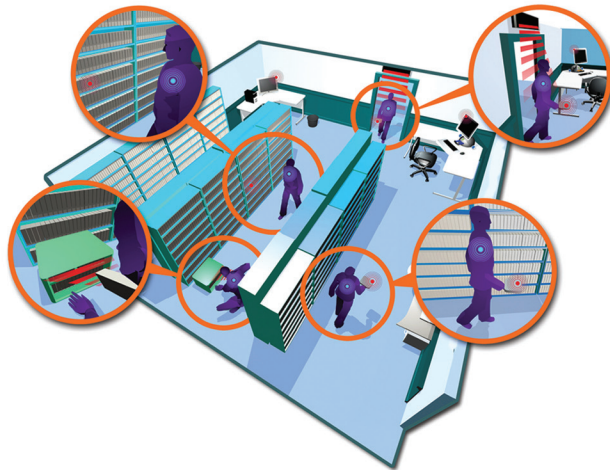

The tracking of assets and items within a warehouse or other facilities often requires the use of a handheld RFID reader. This mobile handheld device allows the operator to move about freely and scan shelves or areas taking an inventory of the items quickly and easily. The handheld device also allows the operator to do a single item search to find a particular item that may be misplaced within the facility.

- ✓ Download inventory to a handheld reader
- ✓ Scan a premises or area
- ✓ View inventory results directly from a handheld reader
- ✓ Identify missing inventory items
- ✓ Download inventory results back to a server

### Industry Solutions

#### Banking and Media Identity

Security of media and customer identity information has certainly come under scrutiny and concern in the last few years. SecurLynx™ has developed and installed an RFID solution to enable the confirmation and tracking of media as it is being loaded into transport containers, transferred in and out of data centers or facilities, and finally unloaded from the transport container at the final destination. The system allows two custodial relationships to be assigned during the process, that is, the assigning of the media to the container and then the container to a person. Using this methodology, absolute accountability is maintained during the process.

#### Solutions Available for Other Industries

- Government
- Health Care
- Manufacturing
- Jewelry Retail
